

In the Claims

Please amend Claims 14-19. Claims remaining in the application are as follows:

1. (Previously Amended): A method for operating a server to provide content in association with image data, comprising:
communicating data via a communications network;
receiving image data and associated position data from a client connected to the network;
retrieving content data related to said position data from a database coupled to the server; and
producing an annotated image including said image data and said content data.
2. (Original): The method of claim 1, wherein said retrieving comprises:
identifying a location name corresponding to said position data;
querying at least one content database with said location name; and
receiving content data from said content database in response to said querying.
3. (Original): The method of claim 2, wherein said identifying a location name comprises:
querying a location database with said position data; and
receiving a location name from said location database in response to said querying.
4. (Previously Amended): The method of claim 2, wherein said content database comprises text.
5. (Original): The method of claim 1, further comprising:
receiving chronological data in association with said image data;
querying at least one content database with said chronological data; and
receiving content data from said content database in response to said querying;
wherein said annotated image includes data obtained from said content database in response to said query based on said chronological data.

6. (Previously Amended): The method of claim 5, further comprising serving said annotated image to a client.

7. (Original): The method of claim 5, wherein said serving comprises serving a web page to said client, said web page including said annotated image.

8. (Original): The method of claim 1, wherein said position data comprises longitude and latitude coordinates.

9. (Original): The method of claim 1, further comprising storing said annotated image.

10. (Original): The method of claim 9, further comprising granting conditional access to said stored annotated image.

11. (Original): The method of claim 1, further comprising printing said annotated image.

12. (Previously Amended): A method for operating a server to provide content in association with image data, comprising:

communicating data via a communications network;

receiving image data and associated position data from a client connected to the network;

querying a location database coupled to the server with said position data; and receiving a location name from said location database in response to said querying.

13. (Original): A system adapted to generate content in association with image data, comprising:

a location database;

a content database; and

a server connected to said location database and to said content database, said

server adapted to

receive image data and associated position data from a client,

retrieve content data from a content database, said content data related to said position data,
produce an annotated image including said image data and said content data,
and
serve said annotated image to said client.

14. (Currently Amended) An article of manufacture comprising:
a ~~controller~~ server usable medium having a computable readable program code embodied therein for operating a the server to provide content in association with image data, the computable readable program code further comprising:
a code capable of causing the ~~controller~~ server to communicate data via a communications network;
a code capable of causing the ~~controller~~ server to receive image data and associated position data from a client connected to the network;
a code capable of causing the ~~controller~~ server to retrieve content data related to said position data from a database coupled to the server; and
a code capable of causing the ~~controller~~ server to produce an annotated image including said image data and said content data.

15. (Currently Amended) The article of manufacture according to Claim 14 further comprising:
a code capable of causing the ~~controller~~ server to identify a location name corresponding to said position data;
a code capable of causing the ~~controller~~ server to query at least one content database with said location name; and
a code capable of causing the ~~controller~~ server to receive content data from said content database in response to said query.

16. (Currently Amended) The article of manufacture according to Claim 15 further comprising:
a code capable of causing the ~~controller~~ server to query a location database with said position data; and
a code capable of causing the ~~controller~~ server to receive a location name from said location database in response to said querying.

17. (Currently Amended) The article of manufacture according to Claim 14 further comprising:

- a code capable of causing the ~~controller~~ server to receive chronological data in association with said image data;
 - a code capable of causing the ~~controller~~ server to query at least one content database with said chronological data; and
 - a code capable of causing the ~~controller~~ server to receive content data from said content database in response to said querying;
- wherein said annotated image includes data obtained from said content database in response to said query based on said chronological data.

18. (Currently Amended) The article of manufacture according to Claim 14 further comprising:

- a code capable of causing the ~~controller~~ server to receive image data and associated position data;
- a code capable of causing the ~~controller~~ server to query a location database with said position data; and
- a code capable of causing the ~~controller~~ server to receive a location name from said location database in response to said querying.

19. (Currently Amended) The article of manufacture according to Claim 18 further comprising:

- a code capable of causing the ~~controller~~ server to query at least one content database with said location name;
- a code capable of causing the ~~controller~~ server to receive content data from said content database in response to said query;
- a code capable of causing the ~~controller~~ server to produce an annotated image including said image data and said content data;
- a code capable of causing the ~~controller~~ server to serve a web page to said client, said web page including said annotated image; and
- a code capable of causing the ~~controller~~ server to store said annotated image.

20. (Previously added) The method according to Claim 12 further comprising:
querying at least one content database with said location name;
receiving content data from said content database in response to said querying;
producing an annotated image including said image data and said content data;
serving a web page to said client, said web page including said annotated image; and
storing said annotated image.
